

We don't 'LAY' turf, we INSTALL NEW LAWNS!

• Turf Installation

1. The turf is laid around the border of the area first and then filled in, *this creates a border of turf that is much easier to cut excess turf against and reduces the risk of damaging any hardscape areas.*
2. On a sloped area, the turf is to be laid horizontally across the slope starting from the bottom of that slope (*This ensures that the turf will not slip or move during heavy rainfall.*)
3. The turf is to be staggered (*creating a brick like pattern*) on all areas.
4. The turf is laid the longest and straightest way possible (*This reduces the amount of waist.*)
5. **Do not use a piece of turf any smaller than 400mm x 400mm as it will not survive.** Use a full piece of turf will be where possible.
6. Peg the turf when the slope is greater than 45 degrees. The pegs are to be inserted where 2 pieces of turf join, *this prevents the turf from moving or slipping.*
**NOTE – this is ONLY required where the slope is greater than 45 degrees*
7. Ensure there are no gaps between any of the pieces (slabs or rolls) of turf. All pieces of turf should be closely butted up with each other.
8. The turf is to be laid in sectors, ensuring that each sector maintains the desired preparation quality. This prevents the preparation of the site being destroyed by traffic (*both foot and machinery*).
9. Use a string line to create a straight edge in areas where there are no other borders (*this ensures a uniform neat straight edge*).

• Post Installation

1. Irrigate the turf with approximately 20mm of water (*15 minutes with a sprinkler*) within 30 minutes of laying the turf. Do this with each sector of turf that is laid.
2. Roll the entire turf area with a suitable turf roller, *the turf is to be moist prior to rolling to ensure the desired effect is achieved.*
3. Irrigate the turf straight after rolling with approximately 20mm of water (*15 minutes with a sprinkler*).
4. Ensure all waste materials are disposed off in a responsible manner (*rubbish in any available skips, left over turf is to be taken off the site*).
5. Clean up any mess left on and around the turf installation site and ensure the turf site is left clean and tidy.
6. Read and Follow '**Coastal Turf Establishment and Maintenance Guideline**', *this information is attached to all of our invoices.*
7. **Enjoy your new Lawn!**
